Collecting Evoked Potential Studies for R. EP T. examination eligibility

ABRET does not stipulate who the EPs are performed on, whether patients or volunteers. They only have an interest in knowing the candidate is able to perform clinical evoked potential studies outside the OR. It is desirable that all R. EP T.s are able to apply electrodes, stimulate appropriately, obtain and identify waveforms for routine clinical EPs. Since EP studies performed on volunteers are not read by a physician, we will require that a clinical neurophysiologist or physician initial a printout of the study signifying that the study was interpretable and waveforms marked correctly. These should be maintained by the candidate until the credential has been awarded.
